RESEARCH MONOGRAPHS

[3] Implicit Functions and Solution Mappings. Springer Monographs in Mathematics, Springer 2009 (second edition under preparation) (with R. T. Rockafellar).

[2] Well-Posed Optimization Problems. Lecture Notes in Mathematics vol. **1543**, Springer, 1993 (with T. Zolezzi).

[1] Perturbations, Approximations and Sensitivity Analysis of Optimal Control Systems. Lecture Notes in Control and Inf. Sci. vol. **52**, Springer, 1983 (translation: in Russian by Mir, Moscow, 1987).

TEXTBOOKS

[2] Mathematical Optimization. Sofia, Sofia Univ. Press, 1987 (with P. Kenderov and G. Khristov, in Bulgarian).

[1] Optimal Control. Sofia, Nauka i Izkustvo, 1983 (in Bulgarian).

EDITED PROCEEDINGS

[4] System Modeling and Optimization. Proceedings of the 22nd IFIP TC7 Conference held at the Politecnico di Torino, Turin, July 18–22, 2005, Edited by F. Ceragioli, A. L. Dontchev, H. Furuta, K. Marti and L. Pandolfi, IFIP **199** New York, Springer, 2006.

[3] Optimal Control of Ordinary Differential Equations. Proceedings of the Workshop held at the Banach Center of Mathematical Studies, Warsaw, August 30–Sept 4, 2004, Dedicated to Professor Czeslaw Olech, Edited by A. L. Dontchev and K. Malanowski, *Control Cybern.* **34**, No 3, 2005.

[2] Well-posedness in Optimization and Related Topics. Proceedings of the 8th Conference held at the Banach Center of Mathematical Studies, Warsaw, Sept. 10–14, 2001, Edited by A. L. Dontchev, K. Malanowski, T. Zolezzi, *Control Cybern.* **31**, No 3, 2002.

[1] Systems Modeling and Optimization. Proceedings of the 18th IFIP TC7 Conference held in Detroit, MI, July 22–25, 1997, Edited by M. P. Polis, A. L. Dontchev, P. Kall, I. Lasiecka and A. W. Olbrot, Chapman & Hall/CRC Research Notes in Mathematics vol. **396**, Boca Raton, FL, Chapman & Hall/CRC, 1999.

PAPERS

[117] Local convergence of quasi-Newton methods under metric regularity, *Comp. Optim. and Appl.* electronically published Oct. 2013 (with F. Aragón, A. Belyakov and M. López).

[116] An Euler-Newton continuation method for trackings solution trajectories of parametric variational inequalities. *SIAM J. Control Optim.* **52** (2013), 1823–1840 (with M. I. Krastanov, R. T. Rockafellar and V. M. Veliov).

[115] Generalizations of the Dennis-Moré theorem. *SIAM J. Optim.* **22** (2012), 821–830.

[114] Parametric stability of solutions to problems of economic equilibrium. *J. Convex Analysis* **19** (2012), 975–997 (with R. T. Rockafellar).

[113] On derivative criteria for metric regularity. Computational and Analytical Mathematics: In Honor of Jonathan Borwein's 60th Birthday. Springer Proceedings in Mathematics & Statistics vol. **16**, 361–370 (with H. Frankowska).

[112] Convergence of inexact Newton methods for generalized equations. *Math. Programming B* **139** (2013), 115–137 (with R. T. Rockafellar).

[111] Lyusternik-Graves theorem and fixed points II. *J. Convex Analysis* **19** (2012), 955–973 (with H. Frankowska).

[110] Metric regularity of Newton's iteration. *SIAM J. Control Optim.* **49** (2011), 339–362 (with F. Aragón, M. Geoffroy, M. Gaydu and V. Veliov).

[109] Lyusternik-Graves theorem and fixed points. *Proc. Amer. Math. Soc.* **139** (2011), 521–534 (with H. Frankowska).

[108] Isolated calmness of solution mappings in convex semi-infinite optimization. *J. Math. Anal. Appl.* **350** (2009), 829–837 (with M. J. Canovas, M. A. López, J. J. Parra).

[107] Metric regularity under approximations. *Control Cybern.* **38** (2009), 1283–1303 (with V. Veliov).

[106] Newton's method for generalized equations: a sequential implicit function theorem. *Math. Programming A* **123** (2010), 139–159 (with R. T. Rockafellar).

[105] Robinson's implicit function theorem and its extensions, *Math. Programming A* **117** (2009), 120–147 (with R. T. Rockafellar).

[104] Extensions of Clarke's proximal characterization for reachable mappings of differential inclusions. *J. Math. Anal. Appl.* **348** (2008), 454–460 (with Ts. Donchev).

[103] Convergence of the proximal point method for metrically regular mappings. CSVAA 2004-control set-valued analysis and applications, 1–8, ESAIM Proc., 17, EDP Sci. Les Ulis, 2007 (with F. Aragón Artacho, M. H. Geoffroy).

[102] On the inner and outer norms of sublinear mappings, *Set-Valued Analysis* **15** (2007), 61–65 (with F. Aragón Artacho).

[101] Aubin criterion for metric regularity. *J. Convex Analysis* **13** (2006), 281–297 (with M. Quincampoix and N. Zlateva).

[100] Parametrically robust optimality in nonlinear programming. *Appl. Comput. Math.* **5** (2006), 59–65 (with R. T. Rockafellar).

[99] Perturbations and metric regularity. *Set-Valued Analysis* **13** (2005), 417–438 (with A. S. Lewis).

[98] Metric regularity of semi-infinite constraint systems. *Math. Programming B* **104** (2005), 329–346 (with M. J. Canovas, M. A. López, J. J. Parra).

[97] Regularity and conditioning of solution mappings in variational analysis. *Set-Valued Analysis* **12** (2004), 79–109 (with R. T. Rockafellar).

[96] A local selection theorem for metrically regular mappings. *J. Convex Analysis* **11** (2004), 81–94.

[95] An introduction to strong regularity. In: Parametric Optimization and Related Topics VII, Aportaciones Mat. Investig. vol. **18**. México, Soc. Mat. Mexicana, 2004, 45–80.

[94] On the Bartle-Graves theorem. *Proc. Amer. Math. Soc.* **131** (2003), 2553–2560 (with J. M. Borwein).

[93] Singular Perturbations in infinite-dimensional control systems. *SIAM J. Control Optim.* **42** (2003), 1795–1812 (with Ts. Donchev).

[92] The radius of metric regularity. *Trans. Amer. Math. Soc.* **355** (2003), 493–517 (with A. S. Lewis, R. T. Rockafellar).

[91] A Newton method for shape-preserving spline interpolation. *SIAM J. Optim.* **13** (2002), 588–602 (with H. Qi, L. Qi, H. Yin).

[90] Quadratic convergence of Newton's method for convex interpolation and smoothing. *Constr. Approx.* **19** (2003), 123–143 (with H. Qi, L. Qi).

[89] Quadratic convergence of Newton's method for constrained interpolation. In: Approximation theory X (St. Louis, MO, 2001), Innov. Appl. Math. Nashville, TN, Vanderbilt Univ. Press, 2002, 261–270 (with H. Qi, L. Qi).

[88] Primal-dual solution perturbations in convex optimization, In: Well-posedness in optimization and related topics (Gargnano, 1999) *Set-Valued Analysis* **9** (2001), 49–65 (with R. T. Rockafellar).

[87] Ample parameterization of variational inclusions, *SIAM J. Optim.* **12** (2001), 170–187 (with R. T. Rockafellar).

[86] Continuity properties of Newton's mapping for variational inclusions *C. R. Acad. Bulgare Sci.* **53** (2000), 19–22.

[85] Lipschitzian stability of Newton's method. In: System Modeling and Optimization (Cambridge, 1999). Boston MA, Kluwer Acad. Publ., 2000, 119–147.

[84] On quantitative stability in optimization and optimal control. *Set-Valued Analysis* **8** (2000), 31–50 (with W. W. Hager, K. Malanowski and V. M. Veliov).

[83] Second-order Runge-Kutta approximations in control constrained optimal control. *SIAM J. Numer. Analysis* **38** (2000), 202–226 (with W. W. Hager and V. M. Veliov).

[82] On the effect of neglecting sensor dynamics in parameter identification problems. *SIAM J. Control Optim.* **38** (2000), 1309–1321 (with M. Polis and V. M. Veliov).

[81] Convergence of Newton's method for convex best interpolation, *Numerische Mathematik* **87** (2001), 435–456 (with H. Qi and L. Qi).

[80] A dual method for deterministic parameter identification. *IEEE Trans. Aut. Control* **45** (2000), 1341–1346 (with M. Polis and V. M. Veliov).

[79] Error bounds for Euler approximation of a state and control constrained optimal control problem. *Numer. Funct. Anal. Optim.* **21** (2000), 653–682 (with W. W. Hager and K. Malanowski).

[78] Uniform convergence and mesh independence of Newton's method for discretized variational problems. *SIAM J. Control Optim.* **39** (2000), 961–980 (with W. W. Hager and V. M. Veliov).

[77] The Euler approximation in state constrained optimal control, *Math. Comp.* **70** (2001), 173–203 (with W. W. Hager).

[76] The Graves theorem revisited II: Robust convergence of the Newton method. *Pliska Stud. Math. Bulg.* **12** (1998), 31–38.

[75] A new approach to Lipschitz continuity in state constrained optimal control. *Systems Control Lett.* **35** (1998), 137–143 (with W. W. Hager).

[74] A characterization of Lipschitzian stability in optimal control (Haifa, 1998). Chapman & Hall/CRC Res. Notes Math. vol. **411**. Boca Raton FL, Chapman & Hall/CRC, 2000, 62–76 (with K. Malanowski).

[73] A proof of the necessity of linear independence condition and strong second-order sufficient optimality condition for Lipschitzian stability in nonlinear programming. *J. Optim. Theory Appl.* **98** (1998), 467–473.

[72] Robinson's strong regularity implies robust local convergence of Newton's method. In: Optimal Control: Theory, Algorithms, and Applications (Eds W. W. Hager and P. M. Pardalos). Kluwer, 1998, 116–129 (with S. Dokov).

[71] Uniform convergence of the Newton method for Aubin continuous maps. *Serdica Math. J.* **22**, No 3 (1996), 385–398.

[70] Characterizations of Lipschitzian stability in nonlinear programming. In: Mathematical Programming with Data Perturbations (Ed. A. V. Fiacco), Lecture Notes in Pure and Appl. Math. vol. **195** Marcel Dekker 1997, 65–82 (with R. T. Rockafellar).

[69] Lipschitzian stability for state constrained nonlinear optimal control. *SIAM J. Control Optim.* **36** (1998), 698–718 (with W. W. Hager).

[68] Local analysis of a Newton-type method based on partial linearization, In: Proc. of the AMS-SIAM Summer Seminar in Applied Mathematics on Mathematics of Numerical Analysis: Real Number Algorithms (Eds. J. Renegar, M. Shub, and S. Smale) AMS Lectures in Appl. Mathematics vol. **32** (1996), 295–306.

[67] Characterizations of strong regularity for variational inequalities over polyhedral convex sets. *SIAM J. Optim.* **6** (1996), 1087–1105 (with R. T. Rockafellar).

[66] An a priori estimate for discrete approximations in nonlinear optimal control. *SIAM J. Control Optim.* **34** (1996), 1315–1328.

[65] A Tikhonov-type theorem for singularly perturbed differential inclusions. *Nonlinear Anal., Theory Methods Appl.* **26**, No 9 (1996), 1547–1554 (with Ts. Donchev and I. Slavov).

[64] Best interpolation in a strip II: reduction to unconstrained convex optimization. *Comp. Optim. Appl.* **5** (1996), 233–251 (with I. Kolmanovsky).

[63] Local convergence of the Newton method for generalized equations. *C. R. Acad. Sci. Paris Série I* **322** (1996), 327-331.

[62] Characterizations of Lipschitz stability in optimization. In: Recent Developments in Well-posed Variational Problems (Eds R. Lucchetti and J. Revalski). Dordrecht, Kluwer Academic Publishers, Math. Appl., Dordr. vol. **331**, 1995, 95–115.

[61] On regularity of optimal control. In: Recent Developments in Optimization, Proc. French-German Conf. on Optimization (Eds R. Durier, C. Michelot) Lecture Notes in Economics and Mathematical Systems vol. **429**, Springer, 1995, 125–135 (with I. Kolmanovsky).

[60] The Graves theorem revisited. *J. Convex Analysis* **3** (1996), 45–53.

[59] Implicit function theorems for generalized equations. *Math. Programming A* **70** (1995), 91–106.

[58] State constraints in the linear regulator problem: a case study. *J. Optim. Theory Appl.* **87** (1995), 323–347 (with I. Kolmanovsky).

[57] Discrete approximations in optimal control. In: Nonsmooth Analysis and Geometric Methods in Deterministic Optimal Control (Eds B. Mordukhovich, H. Sussmann) IMA Volumes in Mathematics and its Applications vol. **78**, New York, Springer 1996, 59–80.

[56] Implicit functions, Lipschitz maps and stability in optimization. *Math. Oper. Research* **19** (1994), 753–768 (with W. W. Hager).

[55] An inverse mapping theorem for set-valued maps. *Proc. Amer. Math. Soc.* **121** (1994), 481–489 (with W. W. Hager).

[54] Implicit functions defined by generalized equations. In: World Congress of Nonlinear Analysts'92 (Ed. V. Lakshmikantham) de Gruyter, 1996, 2289–2298 (with W. W. Hager).

[53] Euler approximation to the feasible set. *Num. Funct. Anal. Optim.* **15** (1994), 245–262 (with W. W. Hager).

[52] On a paper by R. Dapatadu, C. Gibson, and J. Gregory. *J. Math. Anal. Appl.* **182** (1994), 297–298.

[51] On Robinson's implicit function theorems. In: Set-valued Analysis and Differential Inclusions (Eds A. Kurzhanski and V. Veliov) Boston, Birkhäuser, 1993, 75–92 (with W. W. Hager).

[50] Optimality, stability and convergence in nonlinear control., *Appl. Math. Optim.* **31** (1995), 297–326 (with W. W. Hager, A. B. Poore, and B. Yang).

[49] Best interpolation in a strip. *J. Approx. Theory* **73** (1993), 334–342.

[48] Lipschitzian stability in nonlinear control and optimization. *SIAM J. Control Optim.* **31** (1993), 569–603 (with W. W. Hager).

[47] Time scale decomposition of the reachable set of linear systems. *Mathematics of Control, Signals, and Systems* **5** (1992), 327–340.

[46] Difference methods for differential inclusions – a survey. *SIAM Review* **34** (1992), 263–294 (with F. Lempio).

[45] Upper semicontinuity of solutions of singularly perturbed differential inclusions. In: System Modeling and Optimization, Proc. 14th IFIP Conf., Leipzig/GDR 1989 (Eds H.-J. Sebastian and K. Tammer) Lect. Notes Control Inf. Sci. vol. **143**, Springer, 1991, 273–280 (with I. Slavov).

[44] On the admissible controls of constrained linear systems. *C. R. Acad. Bulgare Sci.* **42** (1989), 33–36.

[43] Duality and well-posedness in convex interpolation. *Num. Funct. Anal. Optim.* **10** (1989), 673–690 (with Bl. Kalchev).

[42] A proof of Robinson's theorem. *Proc. 18-th Spring Conf. Bulg. Math. Union*, Sofia, 1989, 290–294.

[41] Error estimates for discretized differential inclusions. *Computing* **41** (1989), 349–358 (with E. Farhi).

[40] Lipschitz properties of the attainable set of singularly perturbed linear systems. *Systems Control Lett.* **11** (1988), 395–391 (with I. Slavov).

[39] On convex and nonnegative best interpolation. *C. R. Acad. Bulgare Sci.* **41** (1988), 21–24 (with Bl. Kalchev).

[38] Duality methods in constrained best interpolation. *Math. Balkanica* **1** (1987), 96–105.

[37] Singular perturbations in linear differential inclusions. *God. Vissh. Uchebn. Zaved. Prilozh. Math.* **22** (1986) I: 9–21, II: 23–33, III: 35–45 (with V. Veliov).

[36] Continuity of the family of trajectories of linear control systems with respect to singular perturbations. *Soviet Math. Dokl.* **35** (1987), 283–286 (with V. Veliov, in Russian).

[35] The constrained linear-quadratic optimal control problem. *Proc. 16-th Spring Conf. Bulg. Math. Union*, Sofia 1987, 84–89.

[34] Singular perturbations in linear control systems with constraints. In: Proc. 25-th CDC, Athens, 1987, 1781–1783 (with V. Veliov).

[33] Equivalent perturbations and approximations in optimal control. In: Trends in Mathematical Optimization (Eds K.-H. Hoffmann, J.-B. Hiriart-Urruty, C. Lemarechal and J. Zowe), Birkhauser, 1989, 43–54; short version *C. R. Acad. Bulgare Sci.* **39** (1986), 27–30.

[32] On the regularity of Kuhn-Tucker curve. *SIAM J. Control Optim.* **24** (1986), 169–176 (with H. Th. Jongen).

[31] A regularized conditional gradient method applied to singularly perturbed optimal control systems. *Serdica Bulg. Math. Publ.* **11**, No 2 (1985), 180–185 (with M. G. Dmitriev and V. M. Veliov).

[30] On the order reduction of optimal control systems. In: Mathematical Control Theory, Banach Center Publ. vol. **14**, Warsaw, PWN, 1985, 181–198.

[29] Continuity of the marginal function of a singularly perturbed optimal control problem. In: VII Konferencja szkoleniowa z teorii zagadnien ekstremalnych. Universytet Lodzki – Institut Matematyki, Lodz, 1985 (with V. M. Veliov).

[28] On the order reduction of linear optimal control systems in critical cases. In: Systems and Optimization (Eds A. Bagchi and H. Th. Jongen) Lect. Notes Control Inf. Sci. vol. **66** Springer, 1985, 180–185 (with V. M. Veliov).

[27] Continuity and asymptotics of the marginal function in optimal control. In: Infinite Programming (Cambridge, 1984) (Eds E. Anderson and A. Filpott) Lect. Notes in Economics and Math. Systems vol. **259**, Springer, 1984, 185–193.

[26] On the behavior of solutions of linear autonomous differential inclusions at infinity. *C. R. Acad. Bulgare Sci.* **36** (1983), 1021–1024 (with V. Veliov).

[25] Singular perturbations in linear control systems with weakly coupled stable and unstable fast subsystems. *J. Math. Anal. Appl.* **110** (1985), 1–30 (with V. Veliov).

[24] Relaxation and well-posedness in nonlinear optimal processes. *Systems Control Lett.* **3** (1983), 177–179 (with B. Mordukhovich).
